

CBM Biometric Kiosks

The CBM Biometric Kiosk can be used by police and sheriff departments or other central booking facilities to fingerprint offenders or to offer applicant processing to the public. Jails can use the device to provide inmate identity verification or even visitor checks. Probation offices can benefit from additional efficiency by allowing probationers to self-check-in such that only those requiring face-time are routed through to parole officers. Driver's license offices can increase productivity by allowing self-service renewals. The opportunities provided by our kiosks are only limited by imagination.

With the CBM Biometric Kiosk, initiating a background check is easy and convenient. Simply walk up to the kiosk, swipe your drivers license or state issued identification, and follow a few on-screen instructions. The CBM Biometric Kiosk will scan fingerprints, take a photo, and then securely submit them electronically to the appropriate authorities.

Features:

- Touchscreen Display
- Small Footprint (only requires a power plug/internet connection)
